

Environmental Consultancy & Information Systems

BMT Cordah Limited

uniquefusion

BMT Cordah Limited represents a new approach to environmental management - a single source that provides a comprehensive range of consultancy, software services and products, underpinned by science, supported by research.

Our resources, products and services are evolving all the time, to meet your changing requirements. We offer an extensive skills base of environmental scientists; a suite of world-class environmental models; and a software team that thrives on developing innovative systems.

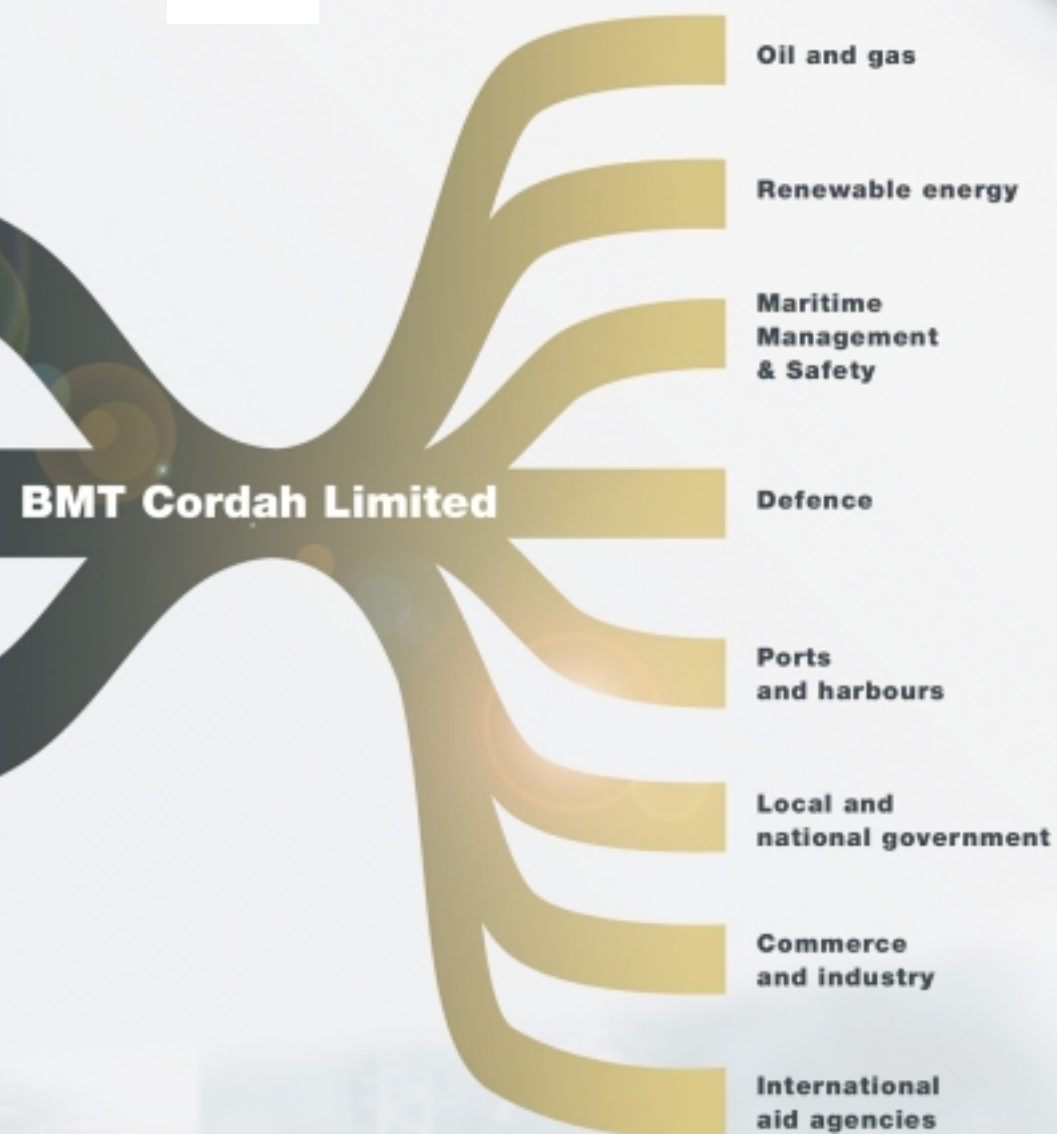

The three strands of BMT Cordah's capability - Consultancy, Software Systems, and Research & Development - combine to deliver added value in exactly the way you need. For more than 20 years, many market sectors have benefited from our services. They appreciate the advantages they gain from the fusion of skills, capabilities and knowledge that we are constantly developing.

supporting decisions

Sometimes you need help - to solve problems, weigh up options, take decisions, make things happen. We can support these activities in many different ways; by analysing data, writing reports, implementing management systems, meeting regulators, advising on policy, or training your staff.

But the underlying benefit we bring is our ability to provide you with the right kind of help in the right sort of way. In today's world this means having a high level of domain knowledge, thoroughness in implementation and flexibility in delivery. Our long track record of working successfully for a wide spectrum of clients has ensured that we fully understand your business environment.

To meet your varied and ever-changing requirements we can provide individuals or project teams in-house, seconded to your offices, or on long-term placement overseas.

Consultancy services

Impact assessment

QHSE management systems and audit

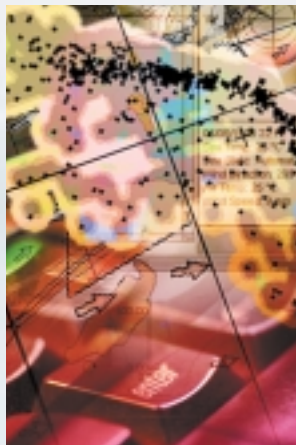

- **Pollution prevention and control**
- **Numerical modelling for oil spills, offshore pollution, search and rescue**
- **Air quality modelling**
- **Waste management**
- **Advice on legislation**
- **Support in planning, licensing and consent applications**

managing data

BMT Cordah differs significantly from other environmental consultancies by retaining a full-time team of highly skilled software engineers. They can deliver both 'off the shelf' and bespoke software solutions to suit your existing and changing requirements. We help you by creating, supplying and supporting software; conducting modelling and predictive studies; collating and managing environmental data; and developing specialised software applications.

Our state of the art environmental and marine modelling systems are unparalleled internationally in the rapid assessment of environmental issues, informing decision-making processes, often in emergency response situations. Underpinned by sound science, our systems are hosted in an intelligent software framework called Visual Marine Information Systems (VMIS). In addition to our own systems, we operate and apply a range of GIS systems including Bentley's Geographics, ArcView and MapInfo. Our consultants apply these to a large range of management situations in both the terrestrial and aquatic environments.

BMT Cordah's commitment to the support of existing systems, development of new applications and provision of flexible delivery channels, keep us at the cutting edge in environmental modelling, decision support and information systems.

Software systems

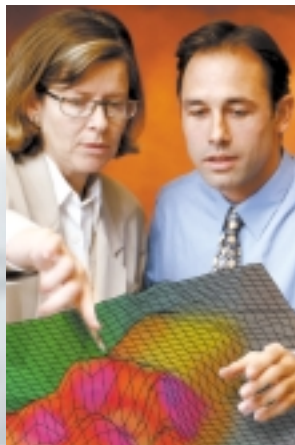

- **Geographical Information Systems (GIS)**
- **Oil spill and chemical spill modelling**
- **Oil spill clean-up decision support**
- **Search and Rescue**
- **Modelling for produced waters, drill muds and cuttings, ecotoxicology**
- **Coastal pollution**
- **Acoustic modelling**
- **Air dispersion modelling**
- **Environmental sensitivity mapping**
- **IT systems development and support**

developing ideas

Developing and building new ideas is important to your business. We retain a research and development team dedicated to the search for ideas that generate benefits that we can transfer to you through our products and services. Our team is acutely aware of the need to deliver realistic and practical solutions to your problems at a time when you need them.

We are highly successful at winning and delivering large R&D programmes from external sources, including the European Commission, UK Department of Trade and Industry, and the UK Offshore Operator's Association. In addition, we have our own internal R&D programme to identify and develop new products and services.

Conducting these programmes enhances our knowledge base, increases our skills and stimulates our imagination. And, in the work we do for you, this translates into informed support, innovative solutions and leading edge delivery.

Consultancy services

Research and Development

R&D contract management and support
